The invention relates immunogenic composition for eliciting an immune response to luteinising hormone releasing hormone (LHRH). The composition comprises a LHRH-diphtheria toxoid (DT) conjugate adsorbed to an ionic polysaccharide. The LHRH-DT compositions can be used for an ionic polysaccharide. The LHRH, for castrating an animal, for regulating on immune response to LHRH, for castrating an animal, for regulating oscurse cycling in a female animal or for inhibiting characteristics induced by the sexual maturation of an animal, e.g. aggression or sexual activity. They can also be used for achieving production gains in livestock, e.g. reduction or elimination of unwanted organoleptic characteristics from the meat of livestock. They can also be used for inhibiting the growth of cells which are regulated directly or indirectly by LHRH, e.g. malignant breast cells, malignant prostate cells, malignant ovarian cells, malignant oncofoctal cells or hyperplastic cells. They can also be used for down-regulating the libido of an animal. They can also be used for inhibiting pregnancy, prostate calargement, endometriosis or inflammatory responses. The LHRH carrier-adjuvant compositions. The effective immune response against LHRH results in prevention of the release of the hormones LH and animal.
                                                                                                                                                                                                                                                                                                                               LHRH; immune response; luteinising hormone releasing hormone; DT; diphtherira toxoid; castrating; oestrus cycling; aggression; breast; sexual activity; organoleptic; livestock; cell growth; malignant; prostate; ovarian; oncofoetal; hyperplastic; pregnancy;

Conjugates of the peptide with an immunogenic carrier protein can be used as an anti-LHRH vaccine. (An alphatylabulin/LHRH conjugate can also be used as anti-LHRH vaccine). The vaccines are administered shortly before slaughter to suppress the action of androgenic and non-androgenic hormones in non-castrated male animals. This allows the advantages associated with the male character (greater weight gain, more efficient feed utilisation and leaber carcasses) to be retained practically up to the time of salaughter. The treatment does not induce any local reactions which could result in the meat being rejected on grounds of quality.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Immunoneutralisation; luteinising hormone releasing hormone; GnRH;

It was used to demonstrate the novel adjuvant of the invention, which has lower reactogenicity then previous compositions. Vaccination of humans and animals against LHRH can be used as a method of fertility control, as well as enabling the control and treatment of disorders of the reproductive organs, such as testicular, breast, prostate and ovarian cancers, prostate enlargement and endometriosis. The composition of the larter of which is an immunostimulant, and it can also be used with other immunogens including soluble protein antigens, peptide haptens conjugated to a carrier protein and whole viruses.

Peptides of the SQs in AAP60174 and AAP60175 are claimed, the last 8 AAS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gonadotropin releasing hormone; GnRH; motility disorder; functional bowel disease; leuprolide acetate; luteinising hormone; progesterone; relaxin; autonomic nervous system; drug delivery; therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of which are the same and in the same order as the last 8 residues of LHRH. Except at very low pH AAP60175 dimerises quickly through the SH gps. of Cys to give a dimer which is also claimed. A mixture of AAP60175, and a conjugate of a carrier protein and AAP60175, and a conjugate of a carrier protein and AAP60175 and the dimer is claimed as a vaccine. Dosage is 0.2-1.0 mg/kg given twice at a 3-6 week interval.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                            Sequence of luteinising hormone releasing hormone (LHRH) analogue.

composition comprises a LHRH-diphtheria toxoid (DT) conjugate adsorbed to an indirect to luteinising hormone releasing hormone (LHRH). The composition comprises a LHRH-diphtheria toxoid (DT) conjugate adsorbed to an indir polysaccharide. The LHRH-DY compositions can be used for a liciting an immune response to LHRH, for castrating an animal, for regulating obstrus cycling in a female animal or for inhibiting characteristics induced by the sexual maturation of an animal, e.g. characteristics induced by the sexual maturation of an animal, e.g. production gains in livestock, e.g. reduction or elimination of unwanted organoleptic characteristics from the meat of livestock. They can also be used for inhibiting the growth of cells which are regulated directly or indirectly by LHRH, e.g. malignant breast cells, malignant prostate cells, malignant ovarian cells, malignant oncofoetal cells or indirectly by LHRH, e.g. malignant oncofoetal cells or indirectly by LHRH, e.g. malignant oncofoetal cells or indirectly cells. They can also be used for inhibiting pregnancy, prostate of an animal. They can also be used for inhibiting pregnancy, prostate cells. They can also be used for inhibiting pregnancy, prostate callargement, endometriosis or inflammatory responses. The LHRH than the LHRH-carrier-adjuvant compositions. The effective immune response against LHRH results in prevention of the release of the hormones LH and Advisations in the anterior pituitary. Sequences AMW94890-93 are peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates immunogenic composition for eliciting an immune

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequences representd by AAR86846-56 are analogues of gonadotropin releasing hormone (GDRH) (AAR86845 represents the naturally occuring form). Analogues of GRRH are represented by AAR86846-56. Motility disorders, including functional bowel disease, can be treated by the administration of one of the GDRH analogues shown here (e.g. leuprolide acetate). This is due to the GDRH analogues shown here (e.g. leuprolide acetate). This is due to the GDRH analogues shown here (e.g. leuprolide reproductive hormones such as luteinising hormone, progesterone and relaxin. Motility disorders are caused from abnormalities of the autonomic nervous system. The GDRH analogues are dunoning nervous system. The GDRH analogues are administered by injection (which may be intravenous, subcutaneous or intramuscular), or by a drug delivery system. The drug delivery system can comprise a drug implant with time release, a nasal spray or an injection of a long-lasting depo form. This method is used to alleviate symptoms such as nausea, vomiting, abdominal pain and altered bowel habits. The sequences can be used to treat motility disorders in a wide variety of other diseases including irritable bowel syndrome, diabetes, scleroderma and Parkinson's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                             Novel \ensuremath{\mathbb{T}} helper cell epitopes derived from canine distemper virus useful for preparation of canine vaccines
                                                                                                                                                                                                                                                                                      (LHRH). It is used in vaccines with T helper cell epitopes AAB08076-808101, derived from canine distemper virus (CDV). Composition comprising these T cell helper epitopes are useful for inducing an immune response in an animal. The epitopes are useful as components of animal, in particular, canine vaccines, either simply as synthetic peptide based vaccines and as additions to vaccines containing more complex antigens.
                                                                                                                                                                                                                                                                        The present sequence represents luteinising hormone releasing hormone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ................
                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is a peptide fragment of human luteinising hormone releasing hormone (also known as LHRH, GnRH and gonadotrophin releasing hormone). It was used to demonstrate the novel adjuvant of the invention, which has lower reactogenicity then previous compositions. Vaccination of humans and animals against LHRH can be used as a method of fertility control, as well as enabling the control and treatment of disorders of the reproductive organs, such as testicular, breast, prostate and ovarian cancers, prostate enlargement and endometriosis. The composition of the invention contains an anionic macromolecule and a saponin component, the latter of which is an immunostimulant, and it can also be used with other immunogens including soluble protein antiquens, peptide haptens conjugated to a carrier protein and whole viruses.

                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides of 3-50 amino acids. (I) are useful for modifying therapeutic peptides of 3-50 amino acids. (I) are useful for modifying therapeutic peptides of 3-50 amino acids. (I) are useful for modifying therapeutic peptides as they require frequent factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half If) and specificity as bonding to large molecules decreases intracellular uptake and interference with physiological processes. AAB90829 to AAB92441 represent peptides which can be used in the creaming companion.
                                                                                                                                                                                                                                                                                                                                                                      ó,
Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GnRH-III; autoimmune disease; transplant rejection; retroviral disease;

The present invention relates to a product comprising a proliferatively active molety (PAM) linked to nucleic acid material which is associated with a protective material. The PAM product is useful for manufacturing a medicament for treating e.g. an autoimmune disease, transplant rejection, retroviral disease, graft-versus-host-disease, or lymphoproliferative disease, comprising cells bearing a high affinity receptor for PAM. The present sequence is a peptide hormone, which has high-affinity receptors, and therefore can be used in the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The inventors claim a compsn. for the redn. or prevention of undesired prostatic growth in males. The compsn. contains a decapeptide (gonadorelin) (AAP10097) with an appropriate vehicle or support. The compsn. is used for treating e.g. benign prostatic hyperplasia by parenteral admin. in daily doses of 0.035-11.0 (pref.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence of luteinising hormone (LH-RH, ICSH) liberating hormone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gonadorelin for treatment of benign prostatic hyperplasia - is the deca:peptide Pyr-His-Trp-Ser-Tyr-Gly-Leu-Arg-Pro-Gly-NH2 or luteinising hormone liberating hormone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

A composition is claimed containing LHRH or its analogues. The composition is used to treat prostate adenocarcinoma, benign hypertrophy of the prostate, endometriosis, dysmenorrhea, hirsutism, hormone-dependent mammary tumours, for treatment or prevention of precocious puberty, delaying the onset of puberty and for treating acce. The compositions may also contain antiandrogens.
                                                                                                                                                                                                                                LHRH; Follicle Stimulating Factor; FSH; acne; hirsutism; dysmennorhea; precocious puberty; endometriosis; prostate cancer; benign prostate hypertrophy; mammary tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                    /note= "amidated or absent, in which case Pro(9)
   is Pro-NH-C2H5"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  LH-RH, liberating factor for LH and FSH, and its agonists co - used to treat prostate adenocarcinoma, benign hypertrophy the prostate, hirsutism, acne, etc.

The claimed peptide antagonists inhibit the release of gonadotrophins and/or steroids. They are antagonistic to GnRH, inhibit ovulation, and may cause resorption of a fertilised egg if administered shortly after absorption. The peptides also have utility in male contraception, and in treatment of precoscious puberty, hormone dependent neoplasia, dysmenorrhoea and endometriosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

steroid receptor protein svp 1 - fruit fly (Drosophila melanogaster)
C; Species: Drosophila melanogaster
C; Species: 22-un-1990 #sequence_revision 22-Jun-1990 #text_change 20-Sep-1999
C; Accession: A33693
R; Mlodzik, M.; Hiromi, Y.; Weber, U.; Goodman, C.S.; Rubin, G.M.
Cell 60, 211-224, 1990
A; Title: The Drosophila seven-up gene, a member of the steroid receptor gene superfam A; Accession: A33693
A; Accession: A33693
A; Accession: A35693
A; Accession: A3693
A; Residues: Preliminary
A; Molecule type: mRNA
A; Residues: 1-543 < MLO>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δλ
                                                                                                                                                                                    leucyl aminopeptidase (EC 3.4.11.1) - parsley (fragment)
N.Alternate names: leucine aminopeptidase
C;Species: Petroselinum crispum (parsley)
C;Date: 20-Sep-1999 #sequence_revision 20-Sep-1999 #text_change 20-Jun-2000
C;Accession: T14912
R;Ernst, D.
Submitted to the EMBL Data Library, July 1996
A;Reference number: 218262
A;Accession: T14912
A;Stetus: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: mRNA
A;Residues: 1-295 < CERN>
A;Cross-references: EMBL:X99825
A;Cross-references: EMBL:X99825
A;Cross-references: Leaf
C;Function: catalyzes hydrolysis of amino-terminal amino acid residues; prefers remov
C;Superfamily: cytosol aminopeptidase
C;Keywords: alpha-aminoacylpeptide hydrolase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        leucyl aminopeptidase-like protein (partial) [imported] - Arabidopsis thaliana C;Species: Arabidopsis thaliana (mouse-ear cress) C;Date: 16-Feb-2001 #sequence_revision 16-Feb-2001 #text_change 02-Mar-2001 C;Accession: H85361 R;anonymous, The European Union Arabidopsis Genome Sequencing Consortium, The Cold Sprin Nature 402, 769-777, 1999

A; Description: catalyzes the dismutation of 2 molecules of peroxide radio C; Superfamily: superoxide dismutase (Cu-Zn)
C; Superfamily: superoxide dismutase (Cu-Zn)
C; Keywords: copper; metalloprotein; oxidoreductase; zinc
F; 44, 46, 61, 118/Binding site: copper (His) #status predicted
F; 55-144/Disulfide bonds: #status predicted
F; 61, 69, 78, 81/Binding site: zinc (His, His, His, Asp) #status predicted
F; 141/Active site: Arg #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 C;Keywords: copper; metalloprotein; oxidoreductase; zinc

MIGGIR M., HITOH, Y., Weber U., Goodman C.S., Rubin G.M.;

"The Drosophila seven-up gene, a member of the steroid receptor gene superfamily, controls photoreceptor cell fates.";

Cell 60:211-224(1990).

-!- FUNCTION: PUTATIVE RECEPTOR THAT IS REQUIRED IN PHOTORECEPTOR CELLS PRECURSORS DURING EYE DEVELOPMENT.

-!- SUBCELLULAR LOCATION: NUCLEAR (POTENTIAL).

-!- ALTERNATIVE PRODUCTS: 2 ISOFORMS; TYPE 1 (AC P16375) AND TYPE 2 (SHOWN HERE); ARE PRODUCED BY ALTERNATIVE SPLICING AND ONLY DIFFER IN THEIR C-TERMINAL PART.

-!- SIMILARITY: EXPRESSED IN A SUBSET OF NEURAL PRECURSORS.

-!- SIMILARITY: BELONGS TO THE NUCLEAR HORMONE RECEPTORS FAMILY.

NR2 SUBFAMILY.

TESULT OF MECHANICAL WOUNDED IN THE PROCESSING AND REGULAR
TESULT CATALYTIC ACTIVITY: RELEASE OF AN N-TERMINAL AMINO ACID, XAA-|-
TURNOVER OF INTRACELLUIAR PROTEINS.
TURNOVER OF INTRACELLUIAR PROTEINS.
TORNOVER OF INTRACE OF AN N-TERMINAL AMINO ACID, XAA-|-
XBB-, IN WHICH XAA IS PREFERABLY LEU, BUT MAY BE OTHER AMINO ACIDS
TORNOVER. BINDS TWO ZINC IONS (BY SIMILARITY).
TORNOVERSAMER (PROBABLE)
TORNOVERSAMER (PROBABLE)
TORNOVERSAMER (PROBABLE)
TISSUE SPECIFICITY: IN TUBBES AND FLORAL BUDS OF UNTREATED PLANTS.
TISSUE SPECIFICITY: IN TUBBES AND FLORAL BUDS OF UNTREATED PLANTS.
TISSUE SPECIFICATIVE OF MECHANICAL WOUNDING IS WOSTLY ACCUMULATED
TO THOUGHTON: BY ABSCISIC ACID (ABA), JASMONIC ACID (JA) AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This SWISS-PROT entry is copyright.
